

## Chamber of Commerce

Build a vision and strategies that also look to a future beyond a single decade to encourage confident private as well as the long-term public investment that may be required.

Continue to accumulate the best data we can put together.

Support positively adapting the economy to change without damaging it.

Carbon footprint measured more extensively to include the wider costs and benefits of food localism and a wider assessment of plastic consumption beyond the carrier bag, e.g. use of water bottles.

Examine and if possible, embrace the emerging generation of travel technology rather than a knee jerk adaptation to technologies that are cobbled together from 20th century solutions, e.g. lightweight vehicles and autonomous travel - is there an opportunity for Jersey to pioneer trials?

Protecting a prime natural resource, the marine environment which holds immense opportunities for future generation in term of the sustainable harvest of energy and food.

Encouraging innovation and new technologies in agriculture

Assess whether local agriculture, aquaculture, fishing and the local food trades are more valuable than a simple GVA calculation.
